

This decoder can be used to decode all international products, such as cola-cans, cigarette boxes etc. into situations.

An EAN 13 daycode consists of thirteen digits. Four digits together create a complete situation:
The first digit stands for a transition (how to get to a new place).
The second digit codes the location where the situation will take place. The third digit of the code describes the activity you might perform there. On the fourth position additional equipment is listed, which might be of use in your situation or should be taken with you from home to accomplish it.

This pattern repeats throughout the code:
(1) Transition, (2) location, (3) activity, (4) equipment;
(5) transition, (6) location, (7) activity, (8) equipment;
(9) transition, (10) location, (11) activity, (12) equipment.

Look up each number of your bar code in the decoder and choose one of three options.
Do not decode the thirteenth digit. It is a automatically generated check-digit and not part of your day.

Should for some reason a day:code situation not apply to your ideas, feel free to modify it according to your taste.

Have a pleasant day.

Congress

TRANSITION

- 1 <Biking an unknown route> <Biking to a place you haven't been at for a long time> <Walking on cobblestone streets>
- 2 <Walking in the direction of your ex-partners home> <Walking on a broad avenue> <Biking towards the train station>
